## Instruction to enable Microsoft .NET 3.5

NOTE: This instruction is provided because the .Net 3.5 is not enabled on Windows 10 and 11 by default.

- NOTE: You can enable the .NET Framework 3.5 through the Windows Control Panel. This requires an Internet connection.
- 1. Press the Windows key = on your keyboard, type "Windows Features", and press Enter. The **Turn Windows features on or off** dialog box appears.
- 2. Select the **.NET Framework 3.5 (includes .NET 2.0 and 3.0)** check box, select **OK**, and reboot your computer if prompted.

NOTE: You don't need to select the child items for the following.

- Windows Communication Foundation (WCF) HTTP Activation
- Windows Communication Foundation (WCF) Non-HTTP Activation

End of document.
